Rail

Through almost a century of rail construction involvement, maintenance expertise and technological developments, Strukton Rail has successfully managed to adopt, create and connect past, modern and even future best practices, ensuring optimum availability, reliability, safety and demonstrable quality.

Renovation and new construction of rail: heavy and light rail systems, using advanced methods & modern machines

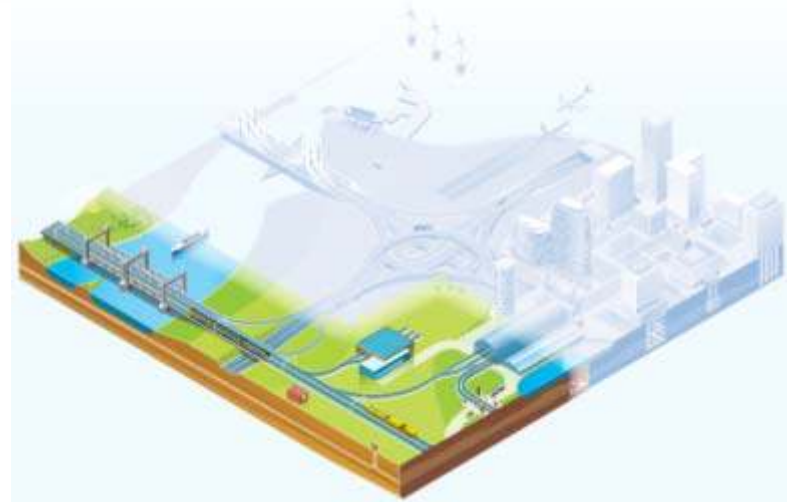

Railway safety: implementation of safety systems in trains and on the track & advanced working methods for working safe

Operational asset management: all modules of asset management, from defining the business needs up to operation & feedback

Train/ energy systems: technological solutions for electric train systems such as traction systems, on-board power transformers and vehicle control systems

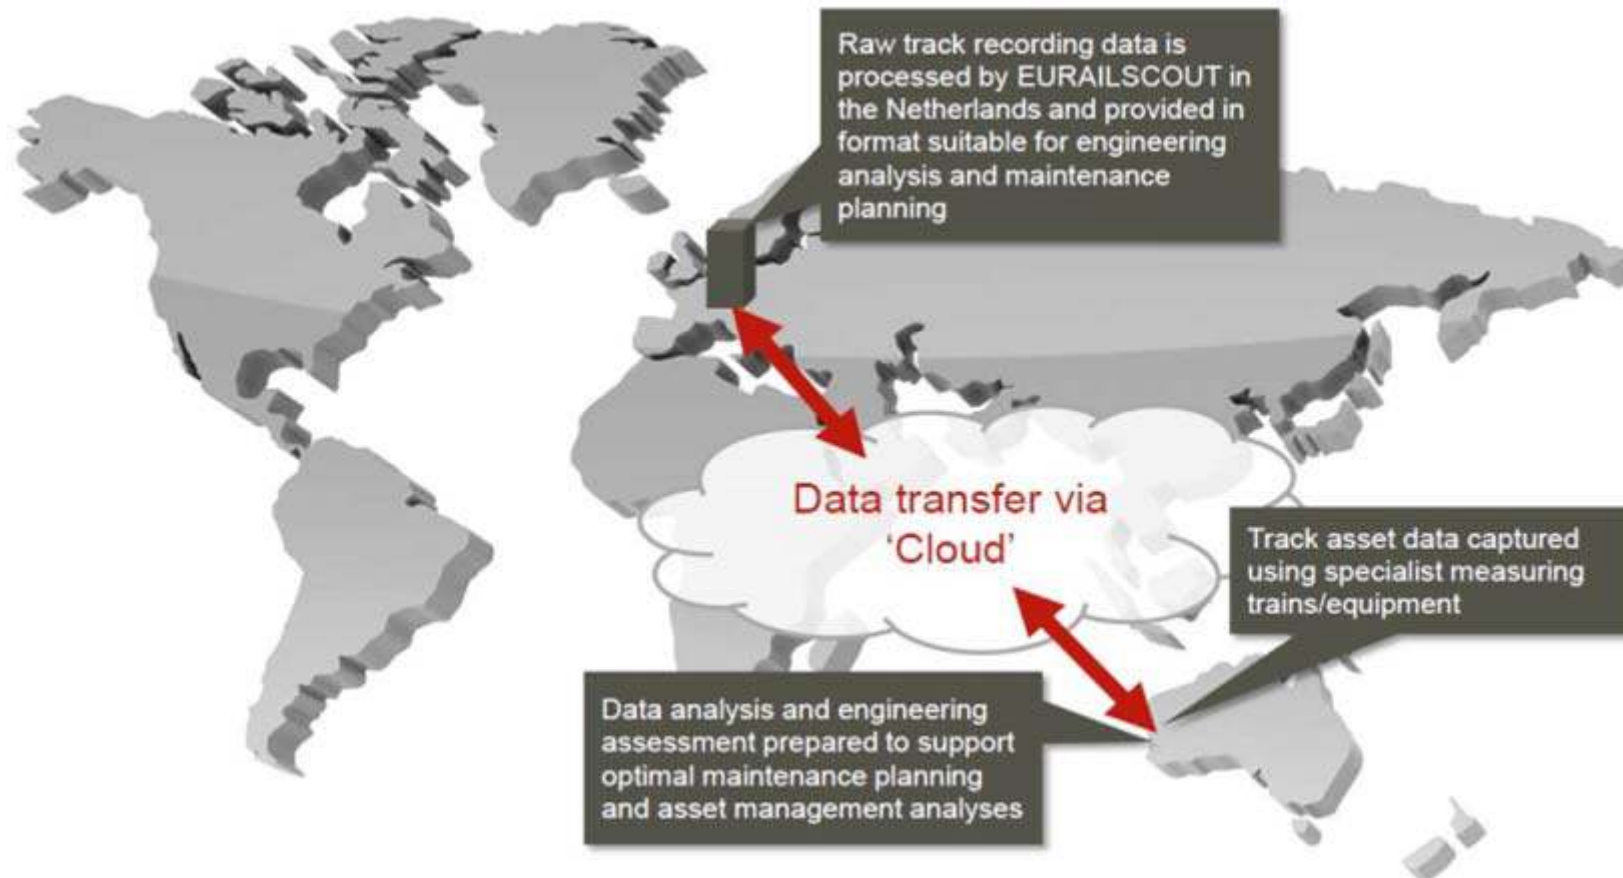

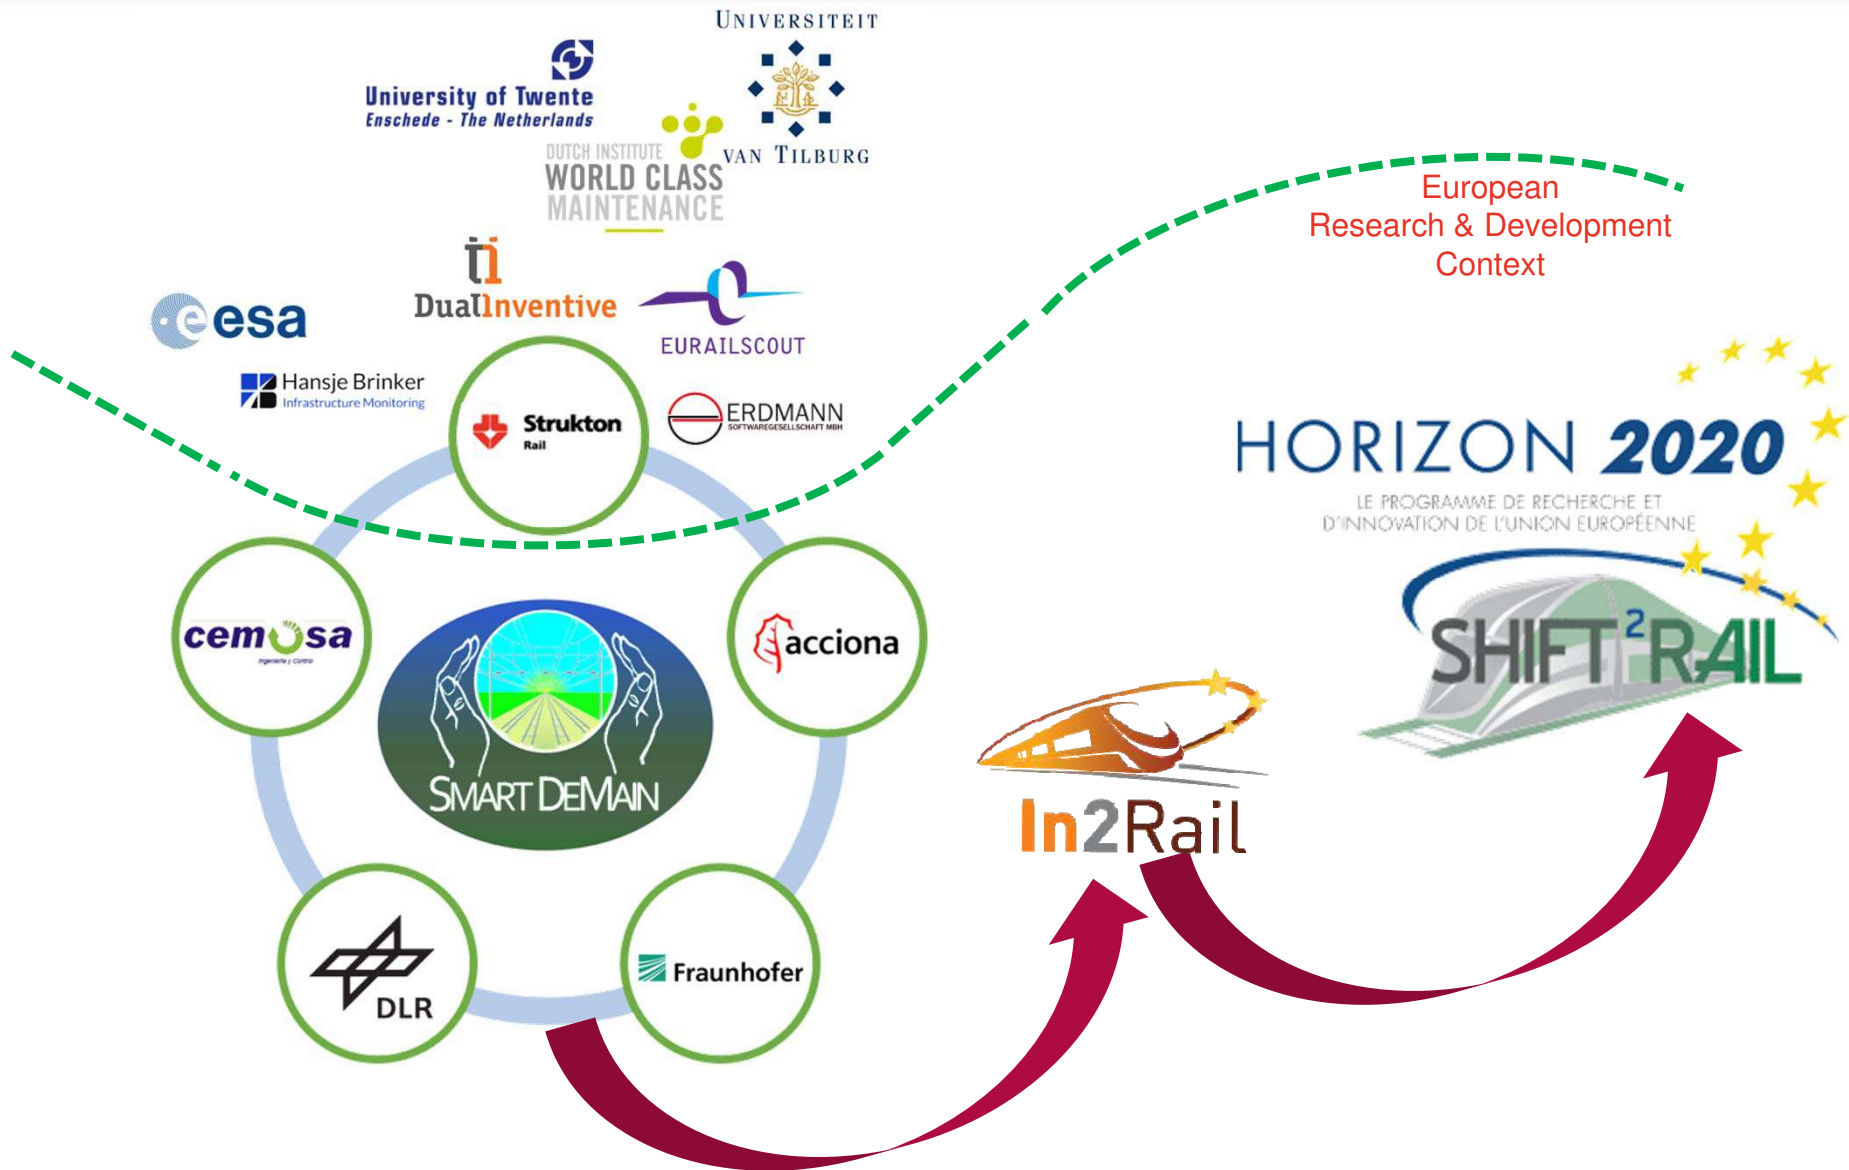

Strukton Rail Objectives:

- Improve our performance in existing contracts
- Provide clients with an Asset management / Availability solution

The next step: Execute AM Worldwide

- Understand potential partners' capabilities
- Discuss rail maintenance R&D in Australia
- Explore joint R&D opportunities
